

Asset Management for Small Water Systems

Need assistance with your small water system?

RCAP Solutions is hosting a free training that will teach system owners & operators the method and benefits of asset management to improve technical, financial and managerial capacity of their system. The goal of the training is to expose students to the concepts of asset management, how AM relates to emergency response and vulnerability assessment, and to focus on applying EPA's CUPSS software.

***The CT Department of Public Health
has approved 6 Training Contact
Hours for public water system
operators.***
